

# PALLET RESTRAINING SYSTEM

## Protecting your products, your premises and your people.

The Vaico PRS system from Dexion was designed and developed in New Zealand by Seismic Engineering and Bracing Specialists Vaico NZ to bring a new level of safety to warehouses and storage environments during a seismic event.

The system's design is simplicity in itself resulting not only in a cost effective but also highly reliable solution. It can be specified for new builds or easily retro-fitted to any existing pallet racking brand. When shaking starts, safety bars swiftly drop down to lock pallets in place and prevent them from moving and falling. The system is unobtrusive and will not impede daily operation within your facility. After activation, the safety bars can be manually reset in seconds.

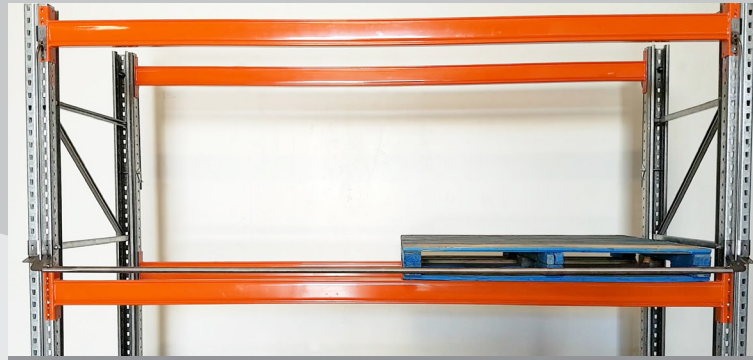

The innovative Vaico system is a one-off, cost-effective pallet rack seismic restraint that will mitigate risk to human life and inventory assets in your operation.

- 
- Secures pallets during a seismic event.
  - The ONLY system that can be easily fitted to any existing pallet racking brand.
  - Easy installation – requires only three components.
  - Automatically deploys restraint drop bar when seismic activity is detected.
  - Protects human (employee staff, customers).
  - Mitigates against inventory loss / financial assets.
  - Does not impede daily operation or shelf access (no other seismic restraint system compares).
  - Cost effective, one time / one-off cost lasts lifetime of the pallet rack.
  - Requires no daily operating expense.
  - Designed in manufactured in New Zealand.

## How it Works

**Activation:** Shows the bar swiftly falling into place upon detection of seismic activity.

**After activation:** The bar has dropped into place and now secures the pallet on the rack.

## Product Integrity

The Vaico PRS system is manufactured in Rangiora, Christchurch, New Zealand using only New Zealand manufactured steel. The steel specification, carefully selected by Vaico to provide the highest level of safety and integrity is also independently tested by New Zealand engineers.

## Installation

Dexion NZ can provide a specialist team to undertake installation at your facility. Dexion NZ holds the highest 5 star contractor PREQUAL safety certification which means that you can rest assured that all safety risks will be managed and all construction methodology is employed at the very highest level.

## Consultation

A detailed consultation can be arranged either by making contact with your nearest Dexion Supply Centre as listed below or by contacting Dexion New Zealand directly.
